

Five steps to securing your identity infrastructure

@Chidambaram-narayanan

My mission is to help you (and I) grow and learn, every day! My favicons include:

- ✓ Auditing of financial and IT systems
- ✓ Cloud awareness
- ✓ Cybersecurity
- ✓ CISA

@Chidambaram-narayanan

Before you begin

Protect privileged accounts with MFA

@Chidambaram-narayanan

1

Strengthen your credentials – password attacks are still the most prevalent vector of identity compromise

2

Reduce your attack surface area –
Disabling the use of older, less secure protocols, limiting access entry points, moving to cloud authentication, and exercising more significant control of administrative access to resources

@Chidambaram-narayanan

3

Automate threat response - Implement sign-in risk policy and other cloud based policies

4

Utilize cloud intelligence - Auditing and logging of security-related events and related alerts are the bare minimum

@Chidambaram-narayanan

5

Enable end-user self-service -
Implement self-service password reset, self-service group and application access, Access reviews etc.

@Chidambaram-narayanan

Help me achieve my mission to bring
valuable ideas, information & inputs to
you.

Like, subscribe, follow (why not all 3?)

Thank you!
